

Virtual APIs in the Public Sector

Transforming Citizen Experience by Realizing the Value of APIs

Online | Wednesday, November 4, 2020 | Start: 12:00pm ET / 9:00 PT

AGENDA OVERVIEW

Application Programming Interfaces, or APIs, are the cornerstone of modern applications, enabling core features of complex software to be extended and integrated in various ways, even more so with the rise of Cloud Computing and Big Data.

APIs are rapidly transforming the way government delivers citizen services and improved experience, while spurring innovation, efficiency, interconnectivity and the secure exchange of data.

However, without understanding how to best leverage and embed APIs, the full benefits they can deliver will go unrealized.

The Public Sector Network's "APIs in the Public Sector" virtual event has been carefully curated to provide insight into how to best go about the development, integration, and management of APIs to fully utilize their potential within your Department/Agency.

REASONS TO ATTEND

- Achieve interconnectivity with the effective use of APIs and agile integration
- Learn how to integrate APIs effectively to ensure the secure exchange of data
- Hear how your public sector peers improving efficiency through creating and executing the right API strategy
- Understand the most effective way to integrate APIs to deliver more accessible and seamless citizen experiences
