

Virtual Data & Analytics in Healthcare

Using analytics to improve quality and safety of health services

Online | Thursday, 12 November 2020

AGENDA OVERVIEW

Healthcare services are at the brink of transformation, with analytics providing valuable insight into how to not only shift the way in which they operate, but also how they deliver more personalized and preventative healthcare. With a strong focus on patient experience, patient flow, and efficiency gains, data is the underpinning source in which this becomes possible.

While the focus is always on the 'next step' in advancing your analytics capabilities, ML, and AI, data management and governance is just as important. Without strong data integrity and frameworks, the foundation on which you build your maturity will be full of cracks. Focusing on both data and analytics is key in creating an environment where clinicians can effortlessly access patient information and knowledge that enhances their clinical practice, and the health system is integrated and high performing, is the overarching vision.

Data isn't the only source to gain valuable insight; the Public Sector Network's "Data & Analytics in Healthcare" Virtual Event will provide the platform for shared experience and bring together a broad group of executives to the table group to generate a diverse range ideas that focus on a common mission: an interconnected, personalized healthcare system. That interconnection starts with conversation.

WHO SHOULD ATTEND

Chief/Director/Head of:

- Data
- Data Management
- Innovation
- Clinical
- Nursing
- Analytics
- Information Management
- Patient Experience
- Medical

SPEAKERS

MEG POUTASI
