

Virtual Hybrid IT & Cloud Computing

Assessing the hybrid and cloud arena: interoperability, management and operations

Online | Wednesday, 10 March 2021

[CLICK HERE TO REGISTER](#)

Agenda Overview

Cloud computing is now on the schema for public sector organisations to drive efficiencies, enable mobility for in-field operations, and turbocharge digital culture transformation programs in order to improve citizen engagement and experience.

Agency personnel responsible for developing and implementing cloud-based solutions continue to look for opportunities to learn about the best technologies, configurations, service and deployment models, and the appropriate mix of cloud services based on their government agency requirements.

Public Sector Network's Hybrid IT & Cloud Computing virtual event, which is free for all government attendees, will review the variety of platforms and solutions available whilst highlighting current government success stories, and ensuring to provide a relevant overview of how those responsible for implementing cloud-based technologies can evaluate the options, choose the best solutions for their agency, and promote maintainable benefits by working from the cloud.

Speakers

DUGALD TOPSHEE 
Chief Information Officer,
Department of Justice Canada

PATRICK QUESNEL
Infrastructure and Hybrid Cloud Lead
Microsoft Asia Pacific Azure

MATT PENNEY
Chief Financial Officer & Chief
Information Officer,
Education NZ
