

Virtual: Disaster Management and Recovery

A Toolkit for Disaster Management and Recovery & Roadmap for Preparedness

Online | Friday, January 22nd, 2021 | Start: 12:00pm ET / 9:00am PT

Agenda Overview

For public sector organizations, there is no room for service interruption. These organizations need to continue running mission-critical services to power essential platforms when faced with a natural disaster, emergency, or cyberattack. These services could be public call centers, patient and judicial databases, or online learning sites. A disaster management and recovery strategy are necessary for public sector organizations that need to be there for their communities.

When it comes to disaster management and recovery, what worked a year ago will not be effective today. So how are you going to address issues without reducing downtime, risk, compromising on data protection? What technologies to adopt? Is it cost-effective in a long run?

Join us at **Public Sector Network's Disaster Management and Recovery** and gain the tools and skills you need to adopt and implement disaster management and recovery strategies in today's unpredictable landscape.
