

Virtual Event: **Enterprise Architecture** **in the Modern Public Sector**

Enabling IT Capability to Ensure Successful Digital Service Delivery

Online: Friday, December 10, 2021 **Time:** 12:00-2:15pm EDT & 9:00-11:15am PDT

AGENDA OVERVIEW

The demand for digital service delivery has exposed challenges in government IT systems. Modernization holds the promise of increased flexibility, efficiency, effectiveness and access to data. How can Enterprise Architecture help – or hinder – your digital transformation journey?

Enterprise architecture is the blueprint that underpins the structure and operation of your organization. It aligns IT and business to enable collaboration that drives better results. Modern EA is outcomes-focused to help respond to a dynamic and constantly-changing environment to help deliver flexible and best in class solutions. In short, it should be well-positioned to anticipate and embrace change.

Public Sector Network's Enterprise Architecture in the Modern Public Sector Virtual Event will bring together CIOs, Chief Architects and other IT leaders to discuss ways that IT systems can be enablers for, as opposed to barriers to, digital service delivery.
