Integrating Smart & Hybrid Cloud Infrastructure for Government Webinar

Maximizing Technological Efficiencies Through Improved Decision Making

Online → Thursday, November 10, 2022 | 12:00 - 1:00pm ET / 9:00 - 10:00am PT

PUBLIC SECTOR NETWORK

Certified B Corporation

Agenda Overview

As a 'cloud-first' mentality continues to permeate public sector leadership – the approach has proven successful for many, but impractical for others. With so many innovative applications and uses to multi-cloud infrastructure – government departments and agencies at all levels are unable to do without. But is this their only option? How do agencies tap into the benefits of multi-cloud infrastructure when compliance and other considerations get in the way of innovation?

Many public sector institutions around the country are beginning to look at alternate locations to host certain apps and workloads, particularly by developing on-prem cloud infrastructure along with bringing added storage online & workloads back from external cloud providers. This provides them with an alternate means for transforming workloads and service delivery. As leaders look to guide their agencies into the era of multi-cloud to support hybrid workforces, those same leaders are asking - how do you go about putting workloads where you can maximize efficiencies and output?

These are among the considerations we will explore at Public Sector Network's Integrating Smart & Hybrid Cloud Infrastructure for Government webinar. Join an innovative speaker line-up of public sector leaders as they address how to maximize technological impact, explore if, and when, to repatriate apps and workloads, and discuss how to finally shift from 'cloud-first' to a true 'cloud-smart' strategy.
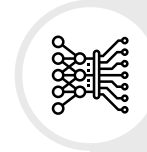

Benefits of Attending

Explore best practices navigating multi-cloud infrastructure to determine the ideal use for your institution

Examine how to best determine, and how to proceed, if apps or workloads need to be repatriated

Discuss the challenges and necessary considerations when moving from a 'cloud-first' to a 'cloud-smart' approach

Who You'll Meet

Commissioners/Chiefs/Deputy Chiefs/Directors/Managers within the following areas from Federal Civilian-focused agencies and departments:

- Information Technology
- Technology
- Cloud Integration
- Data Center Architecture & Operations

- Data Storage
- Enterprise Infrastructure
- Senior Executive Service
- Innovation

- Digital Applications & Technology
- Digital Service Delivery
- Privacy
- Digital Transformation

Welcome from Public Sector Network

Alex Chard, US Head of Content & Programming, **Public Sector Network**

12:05pm ET
9:05am PT

Welcome from Chair

Stephen McElwee, Strategic Solutions Architect, **Iron Bow**

12:20pm ET
9:20am PT

Panel Discussion:

Hybrid & Smart Cloud Integration: Developing a Sound Strategy for Maximizing Cloud Technology's Impact

Flexibility is key for technology leaders across the public sector – allowing for them to address and cope with challenges as needed and with appropriately balanced resources. While urgent imperatives often drive the early adoption of technologies before the impact, scope, and scale of that integration can be fully appreciated – many public sector technology leaders are reassessing that approach and allowing for additional flexibility, scalability, and strategic agility by integrating additional data storage infrastructure to support the repatriation of key assets, applications, and workloads on-prem. This panel discussion will explore how technology leaders across the public sector are transforming their infrastructures and strategies to leverage the hybrid cloud in a more intelligent and nuanced way.

Brian Peltier, Chief Architect, **Social Security Administration**

Thomas Santucci, Director, Government-Wide Policy (DCOI and CloudSmart), **US General Services Administration (Pending Agency Clearance)**

Moderator: Stephen McElwee, Strategic Solutions Architect, **Iron Bow**
